КАРТА ОСНОВНЕ МРЕЖЕ ХИДРОЛОШКИХ СТАНИЦА

УВОД

Хидролошки годишњак Републике Србије издаје се у три књиге:

1. Површинске воде (водостаји, протицаји воде, пронос лебдећег наноса и температуре воде),
2. Подземне воде (водостаји и температуре подземних вода),
3. Квалитет вода (подаци о квалитету површинских и подземних вода).

Хидролошки годишњак - Површинске воде садржи податке прикупљене и обрађене у току календарске године са основне мреже хидролошких станица Републике Србије. На станицама основне мреже по утврђеном програму осматрају се и мере водостаји (Н), протицаји воде (Q), пронос лебдећег наноса (S), температура воде (Т), појава леда, као и други елементи. Хидролошки годишњак за 1991. годину садржи и основне податке о хидролошким станицама основне мреже.

У току 1991. године на територији Републике Србије, без територије Војводине, у основној мрежи станица радило је 173 хидролошких станица површинских вода. На 12 хидролошких станица осматрани су само водостаји, на 124 водостаји и протицаји воде, на 21 водостаји, протицаји воде и температура воде, на 16 водостаји, протицаји воде, пронос лебдећег наноса и температура воде.

Послове прикупљања и обраде хидролошких података са основне мреже станица Републике Србије извршавали су поред Републичког хидрометеоролошког завода Србије и покрајински хидрометеоролошки заводи Војводине и Косова и Метохије.

Од 12.априла.1992. године покрајински хидрометеоролошки заводи интегрисани су у јединствени Републички хидрометеоролошки завод Србије. У међувремену, бивши Покрајински хидрометеоролошки завод Војводине издао је хидролошке годишњаке за 1991. годину површинских и подземних вода и квалитета вода за хидролошке станице на територији Војводине. У овом Годишњаку публикују се хидролошки подаци са основне мреже станица Републике Србије, ван територије Војводине.

ОПИС ТАБЕЛА

СПИСАК И ОСНОВНИ ПОДАЦИ О ХИДРОЛОШКИМ СТАНИЦАМА

У табелама основних података о станици дати су следећи подаци:

- Назив хидролошке станице
- Назив водотока
- Назив слива
- Опрема станице (лимниграф, водомерна летва)
- Година почетка рада станице
- Број - шифра хидролошке станице
- Кота нуле водомера (мпЈМ)
- Удаљеност од ушћа (км)
- Површина слива до профила водомера (км²)

Основни подаци о хидролошким станицама такође су дати у заглављу годишњих прегледа.

ВОДОСТАЈИ

Прегледне годишње табеле водостаја осим дневних вредности садрже и суме по декадама, минималне, средње и максималне водостаје по месецима и за годину, као и датуме појаве екстрема. Датум појаве максимума је означен са "+" поред податка за одговарајући датум, док су минимуми означени са "-".

Водостаји на станицама опремљеним лимниграфом су средњи дневни, док су на осталима водостаји осмотрени у термину 6.00 часова UTC.

Приказани су и највећи и најмањи водостаји у периоду рада станице са датумима појаве. Подаци који не постоје означени су са "нпос". Суво корито са "суво".

ПРОТИЦАЈИ ВОДЕ

Прегледне годишње табеле протицаја воде осим дневних вредности садрже и суме по декадама, минималне, средње и максималне протицаје воде по месецима и за годину као и датуме појаве екстрема. Датум појаве максимума је означен са "+" поред податка за одговарајући датум, док су минимуми означени са "-".

Протицаји воде на станицама опремљеним лимниграфом су израчунати на основу средњих дневних водостаја док су на осталим станицама израчунати на основу водостаја осмотрених у термину 6.00 часова UTC.

Приказани су и највећи и најмањи протицај воде у периоду рада станице са датумима појаве. Подаци који не постоје означени су са "нпос".

ПРОНОС ЛЕБДЕЋЕГ НАНОСА

Прегледне годишње табеле проноса лебдећег наноса осим дневних вредности садрже и суме по декадама, минималне, средње и максималне проносе лебдећег наноса по месецима и за годину, као и датуме појаве екстрема. Датум појаве максимума је означен са "+" поред податка за одговарајући датум, док су минимуми означени са "-".

Приказани су и највећи и најмањи проноси лебдећег наноса у периоду рада станице са датумима појаве. Подаци који не постоје означени су са "нпос".

ТЕМПЕРАТУРЕ ВОДЕ

Прегледне годишње табеле температура воде осим дневних вредности садрже и суме по декадама, минималне, средње и максималне температуре воде по месецима и за годину, као и датуме појаве екстрема. Датум појаве максимума је означен са "+" поред податка за одговарајући датум, док су минимуми означени са "-".

Температуре воде осмотрене су у термину 6.00 часова UTC. Подаци који не постоје означени су са "нпос".

ОЗНАКЕ

- водостаји (H),
- протицаји воде (Q),
- пронос лебдећег наноса (S),
- температура воде (T),
- суме по декадама (SD1, SD2, SD3),
- минимална вредност за месец (MIN),
- средња вредност за месец (SR),
- максимална вредност за месец (MAX),
- минимална вредност за годину (MINGOD),
- средња вредност за годину (SREDNJI),
- максимална вредност за годину (MAXGOD),
- појава максимума "+",
- појава минимума "-",
- суво корито код водостаја "суво",
- највећи водостај осмотрен у периоду рада станице (VVV),
- најмањи водостај осмотрен у периоду рада станице (NNV),
- највећи протицај воде у периоду рада станице (VVQ),
- најмањи протицај воде у периоду рада станице (NNQ),
- највећи пронос лебдећег наноса у периоду рада станице (VVS),
- најмањи пронос лебдећег наноса у периоду рада станице (NNS),
- метара над Јадранским морем (mnJM).
