РЕПУБЛИКА СРБИЈА  
КЛИМАТОЛОШКЕ СТАНИЦЕ У 1996. ГОДИНИ

## МЕТЕОРОЛОШКИ ГОДИШЊАК 1

### Климатолошки подаци

Климатолошки годишњак је састављен на основу мерења и осматрања климатолошких станица у три термина: 7, 14 и 21 сат по локалном времену.

Средње дневне и месечне температуре ваздуха рачунате су по формули:

$$T_{cp} = \frac{T_7 + T_{14} + 2 \cdot T_{21}}{4}$$

Средње дневне и месечне вредности притиска, релативне влажности и напона водене паре рачунају се по формули:

$$X_{cp} = \frac{X_7 + X_{14} + X_{21}}{3}$$

Максимална и минимална температура ваздуха читава се у 21 сат и бележи за тај дан.

Дневне висине падавина односе се на период од 24 сата: од 7 сати претходног дана до 7 сати текућег дана када се региструју.

Висина снежног покривача мери се у 7 сати.

Поред месечних и годишњих вредности регистрованих на 108 мерних места на подручју Србије, годишњак садржи и дневна мерења за 6 станица: Београд, Нови Сад, Приштина, Златибор, Лозница и Ниш.

## METEOROLOGICAL ANNUAL 1

### Klimatological data

Meteorological Annual is made on the basis of measurements and observations of the climatological stations in three terms, at 0700, 1400 and 2100 hours of local time.

Mean daily and monthly air temperatures were obtained by the form:

$$T_{sr} = \frac{T_7 + T_{14} + 2 \cdot T_{21}}{4}$$

Mean daily and monthly values concerning pressure, relative humidity and water vapor were calculated by the form:

$$X_{sr} = \frac{X_7 + X_{14} + X_{21}}{3}$$

Maximum and minimum air temperature is read out at 2100 and recorded for that day.

Daily precipitation amounts concern the period of 24 hours, starting at 0700 on the previous day till 0700 on the current day, when they are registered.

Snow cover depth is measured at 0700.

Besides monthly and annual values registered at 108 measuring points at the territory of Serbia, the Annual includes also the daily measurements at 6 stations: Beograd, Novi Sad, Pristina, Zlatibor, Loznica and Nis.

## МЕТЕОРОЛОШКИ ГОДИШЊАК 1 КЛИМАТОЛОШКИ ПОДАЦИ

У 1996. години на подручју Србије вршена су климатолошка осматрања на 108 станица.

Климатолошки подаци обухватају мерења и осматрања у терминима 07, 14 и 21 сат. Осматрања обухватају 51 метеоролошку појаву и мерења 12 метеоролошких елемената.

Поред основних измерених вредности табеларни прикази садрже и изведене метеоролошке величине: релативну влажност ваздуха, напон водене паре итд.

Месечне вредности су дате за сва мерна места, а дневне вредности мерења и осматрања за 6 станица.

Картографски су приказане годишње вредности најзначајнијих климатолошких параметара.

## METEOROLOGICAL YEARBOOK 1 CLIMATOLOGICAL DATA

Climatological observations were performed at 108 station on the territory of Serbia in 1996.

Climatological data include the measurements and observations at 0700, 1400 and 2100 hours. Observations include 51 meteorological events and measurements of 12 meteorological elements.

The table presentations, besides basical measured values, comprise also the derived meteorological values: relative air humidity, vapour tension, etc.

Monthly values are presented for all the measuring places and daily measuring values for 6 stations.

The annual values of the most significant climatological parameters are presented cartographically.

## ОЗНАКЕ

## ДНЕВНЕ ВРЕДНОСТИ

- ваздушнoг притиска
- температуре ваздуха
- релативне влажности
- напона водене паре
- правца и брзине ветра
- инсолације
- облачности
- падавина
- висине снежног покривача
- појаве

## DAILY VALUES

- air pressure
- air temperature
- relative humidity
- vapour tension
- wind direction and speed
- insolation
- cloudiness
- precipitation
- snow cover depth
- events
